EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Electronics and Communication (GPA: 8.16)

Chennai, TN

Aug 2023 – Present

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, C#, Java, SQL, HTML/CSS, Rust, C/C++

Frameworks: React, Next.js, Express, Hono, Node.js, Vite, Tauri, .NET, Flask

Cloud & Tools: Cloudflare (R2, Edge), AWS, Supabase, Git, GitHub Actions, Docker, Vercel, VS Code, Figma

Concepts/Areas: Full-Stack Development, REST APIs, Agile/SDLC, UI/UX, Unit Testing, CI/CD, Debugging, Problem Solving

EXPERIENCE

Lagoon Technologies

Software Development Intern

Chennai, TN

Sep 2024 – Feb 2025

- Engineered and optimized internal enterprise software tools in **C# and .NET**, delivering features across multiple Agile sprint cycles.
- Debugged and analyzed legacy system architecture, identifying structural bottlenecks to improve maintainability and accelerate release cycles.
- Participated in cross-functional code reviews and daily standups to align software design with enterprise scalability requirements.

TECHNICAL PROJECTS

Dot Mark (Local-First PDF Editor) | TypeScript, React, Vite, Web APIs

Mar 2025 – Present

- Built a zero-backend PDF editor using the **File System Access API** to traverse and open local directories; supports drag-sorted directory listings and persists navigation state across sessions.
- Implemented a non-destructive annotation and editing tools layer — tool state and highlight coordinates serialized per-file into **localStorage**, preserving original PDF integrity with no server required.
- Typed the full editor model in TypeScript with clean separation between file system, tool, annotation, and display layers across dedicated utility modules.

Share (Real-Time Storage Platform) | TypeScript, Vite, Hono, Cloudflare R2

Oct 2024 – Present

- Built a real-time file-sharing platform sustaining **4,700+ req/sec at 21ms avg latency** under load; in-browser previews for PDFs, text, and video codecs, fully serverless with zero plugin dependency.
- Architected a globally distributed backend on **Cloudflare R2** for scalable object storage with edge-local retrieval; deployed routing APIs via **Hono** on Cloudflare Workers for near-zero cold starts.
- Typed the full request/response surface end-to-end in **TypeScript** with a clean RESTful API contract, keeping client and server in sync without a code generator.

Firmware Signer Desktop UI | React, Vite, TypeScript, Tauri, Rust

Jun 2024 – Present

- Architected a cross-platform desktop application using **React, TypeScript, and Vite**, wrapped in **Tauri** for native-level performance and low memory overhead.
- Designed a responsive user interface for managing cryptographic keys and digital signatures, bridging the web frontend with a high-performance Rust backend via Tauri IPC.

LEADERSHIP & COMMUNITY

- Google Developers Club:** Led front-end development for campus portal enhancements; facilitated web technology workshops covering React, CI/CD, and collaborative code review practices.
- Code Chef Developer:** Built and maintained a competitive-programming platform using **Node.js, Express.js**, and **Cloudflare**; applied debugging and unit testing to ensure platform reliability.
